screenshots from real workflows

Verdict. The Hotel PMS and Restaurant POS work end to end on the local XAMPP installation. They behave as two separate systems joined only at the three designed integration points: POS charge to villa → folio, open restaurant checks block checkout, and checkout → housekeeping. All permission boundaries held under direct-URL and direct-API testing. Every money calculation checked in this audit matched the system's tax rules to the cent (examples in §7).

Before live use, two environment actions are required: (1) register the Laravel scheduler in Windows Task Scheduler — without it the automatic night audit, website-hold expiry and key-card expiry never run; (2) cache the configuration on the Windows/XAMPP server (`php artisan config:cache`) to stop intermittent HTTP 500 errors under concurrent requests. Three medium-severity product issues remain (§9): night-audit timing and audit trail, the booking-form summary ignoring a rate override, and the second-outlet shift form being hidden.

Not verifiable here. Real RFID locks and encoders, live OTA connections, a real payment gateway, WhatsApp Cloud API and SMS are not connected or not implemented. The key-card and payment results in this report come from the built-in simulator and sandbox and are labelled as such.

சுருக்கம் (தமிழ்)

257 சோதனைகளில் 254 வெற்றி, 3 வெளிச் சேவை இல்லாததால் தடைப்பட்டன, இறுதி ஓட்டத்தில் தோல்வி இல்லை. 7 குறைபாடுகள் code-இல் சரிசெய்யப்பட்டன (நேர மண்டலம், "Unauthenticated", அனுமதிக் கசிவு உட்பட). நேரடிப் பயன்பாட்டுக்கு முன் Windows Task Scheduler-இல் Laravel scheduler பதிவு செய்ய வேண்டும், `config:cache` இயக்க வேண்டும். சாவி அட்டைகள் மற்றும் பணக் கொடுப்பனவுகள் simulator/sandbox மூலம் மட்டுமே சோதிக்கப்பட்டன.

2 Scope, environment and method

2.1 Environment under test

Item	Value (read from the running system)
Application	Laravel 12 modular monolith (<code>app/Modules/*</code>): 207 PHP classes, 65 controllers, 84 models, 35 services, 178 Blade views, 382 routes (12 public API), 94 tables, 15 roles, 62 permissions, 17 users
Runtime	XAMPP on Windows 11 Pro · Apache (thread-safe mod_php) · PHP 8.2 · MariaDB 10.4.32
URL	<code>http://localhost/vaasal_villa_hospitality_management_system28/public</code>
Configuration	<code>APP_ENV=local</code> , <code>APP_DEBUG=true</code> , <code>SESSION_DRIVER=database</code> , <code>SESSION_LIFETIME=30</code> , <code>CACHE=database</code> , <code>QUEUE=sync</code> , <code>MAIL=log</code>
Integrations	<code>PAYMENT_DRIVER=sandbox</code> · <code>CHANNEL_DRIVER=null</code> · <code>LOCK_DRIVER=simulator</code> · <code>RFID_SIMULATOR=true</code> · no Stripe, WhatsApp Cloud, exchange-rate, Unsplash or Pexels keys
Timezone	<code>APP_TIMEZONE=Asia/Colombo</code> (only effective after fix D-01)
Test databases	<code>vaasal_villa_hms28_test</code> for automated tests (RefreshDatabase); the live dev database <code>vaasal_villa_hms28</code> for live checks and the browser walkthrough, restored from a pre-QA dump first
Tools	<code>php artisan test</code> (PHPUnit), curl, headless Google Chrome driven over the DevTools protocol from PowerShell, MariaDB client, mysqldump

2.2 Test layers

Layer	What it does	Cases	Result
Regression suite (<code>tests/Feature</code> , <code>tests/Unit</code>)	The project's existing tests, re-run after every fix	51	51 PASS, 1,668 assertions
QA harness (<code>tests/QA/QaAuditTest.php</code> , new)	12 scenario methods: roles and direct URLs, PMS end to end, walk-in edge cases, booking sources, POS end to end, integration, housekeeping, key cards, billing, night audit, reports, errors and security	155	153 PASS, 2 BLOCKED
Live HTTP checks (XAMPP)	Environment, assets, public API, CSRF and session behaviour against Apache	20	19 PASS, 1 BLOCKED
Browser walkthrough	Real UI in headless Chrome at 1440×900, 768×1024 and 390×844; examples A–E performed through the screens; full-page screenshots	82	82 PASS (5 captured on a corrected re-run)
Code review	Night audit, room-charge posting, shift rules, weather cache, scheduler, configuration	—	Findings in \$9 and \$13

The QA harness is not part of the default `php artisan test` run. Run it with `php artisan test tests/QA/QaAuditTest.php`; it writes `storage/app/qa/test_cases.csv` and `role_matrix.json`.

3 Feature status

Module / feature	Status	Evidence / notes
Staff sign-in, lockout (5 attempts / 15 min), IP throttle, session timeout	Tested	ERR-01..03, SEC-GUEST-*, SES-01..05; screenshots 14, 75–77
Local-only demo role cards	Tested	Hidden outside APP_ENV=local (SEC-06); password never shown
Password reset e-mail	Partially	Implemented; MAIL=log, so the e-mail round trip was not tested
Roles and permissions (15 roles, 62 permissions)	Tested	90 GET routes per role; 0 server errors; PMS/POS separation (§5)
Bookings: phone, e-mail, admin, walk-in, tour operator, partner portal	Tested	SRC-01..05, WALK-01..10, example A
Website booking with hold and payment	Simulated	Sandbox gateway only (SRC-06..08); no real card processing
OTA / channel manager	Simulated	Signed webhook ingest tested (SRC-09, regression); live Channex connection BLOCKED (SRC-10)
Availability ledger, overbooking and conflict queue, min stay, promos, out-of-order	Tested	PMS-02/03, WALK-*, regression
Check-in (ID, ready villa, key card), checkout (balance, open checks, early departure)	Tested	PMS-*, INT-*, screenshots 04, 10, 16–21, 26
Folio, charges, reversals, payments, refunds, invoices, city ledger	Tested	BILL-*, PAY-*, INT-04, regression
Restaurant POS: tables, modifiers, KOT/KDS, bill, split/merge/move, discount, void, tenders, change	Tested	POS-01..24, KDS, tables; example B
POS room charge to folio; room service	Tested	INT-02, PMS-12, example C
Cashier shifts, drawer movements, day-end, variance, manager review, reopen	Tested	POS-01/24, regression day-end test, screenshots 32, 33, 81, 82
Table reservations	Tested	ERR-06, regression
Inventory, recipes and stock depletion, suppliers, purchases	Tested	Regression (stock depletion on sale); pages open; reports
Housekeeping: tasks, accept, pause, checklist, inspection, reject/approve, linen	Tested	HK-01..12, example E
Maintenance, lost & found	Tested	HK-08, HK-09
Key cards and RFID access control, lock bridge	Simulated	KEY-01..07 on the simulator; physical hardware BLOCKED (KEY-08)
Staff attendance by RFID badge, roster, late and overtime	Tested	Regression tests; device API (simulated)
Night audit	Tested	NA-01..04, screenshot 13; design findings O-03/O-04
Reports (15 types, CSV export)	Tested	RPT-* (17 cases)
In-app notifications	Tested	Settlement request, housekeeping alerts
WhatsApp messaging	Partially	Click-to-chat links only; no WhatsApp Cloud API credentials
SMS	Missing	No SMS gateway integration in the code
E-mail sending	Simulated	MAIL=log (written to storage/logs)
Currency selector	Partially	Display-only conversion tested; live exchange-rate API not configured (static fallback)
Public website, API, weather	Tested	API-01..06, screenshots 78–80; weather cache issue O-07
Stock photos (Unsplash / Pexels)	Partially	Own gallery works; no API keys
Hero video	Not configured	ENV-08: no video set

4 Results by module

Module (QA harness)	Pass	Blocked	Fail
Roles & login / Roles & permissions	30	0	0
Security	13	0	0
Hotel PMS / Front desk / Walk-in	18	0	0
Booking sources / Payments	14	1	0
Billing / Integration	12	0	0
POS / KOT / Kitchen / Tables / Reservations	20	0	0
Housekeeping	12	0	0
Key cards	8	1	0
Night audit	4	0	0
Reports	17	0	0
Login errors / Error pages	5	0	0
QA harness total	153	2	0
Live HTTP checks (environment, API, CSRF, session)	19	1	0
Browser walkthrough screenshots	82	0	0
All layers (excluding the 51 regression tests)	254	3	0

! History of failures during the audit

The first harness run reported 43 failures. 38 were harness mistakes (for example, the form posts `villas[<id>][selected]=1`, and the harness had omitted `selected`) and were corrected in the harness. The rest were real defects, fixed and listed in §8. In the first browser pass, 6 steps failed because of script errors (selector quoting, a root-relative API URL) or unknown data state (two leftover demo checks on T6, and a cashier shift open at another outlet — which led to finding O-06). The corrected re-run captured every screenshot.

5 Roles and permission matrix

Each role was signed in and every parameterless GET route (90) was requested directly, together with the restricted JSON APIs. Allowed routes returned 200/302, forbidden routes 403, and no request returned a 5xx. The matrix below shows the key areas.

Role	Booking	Check-in	Check-out	Room Management	Housekeeping Board	My Cleaning Tasks	Guests	Key Cards	Restaurant Pos	Kot / Kitchen	Payments (pms)	Folio / Guest Charges	Reports (pms)	Restaurant Sales	Admin Settings	Night Audit
Administrator	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Owner	—	—	—	✓	✓	—	✓	✓	—	—	✓	—	✓	—	—	—
Hotel Manager	✓	✓	✓	✓	✓	—	✓	✓	—	—	✓	✓	✓	—	—	✓
Receptionist	✓	✓	✓	✓	✓	—	✓	✓	—	—	✓	✓	✓	—	—	—
Accountant	—	—	—	—	—	—	✓	—	—	—	✓	✓	✓	—	—	—
Restaurant Manager	—	—	—	—	—	—	—	—	✓	✓	—	—	—	✓	—	—
Cashier	—	—	—	—	—	—	—	—	✓	—	—	—	—	—	—	—
Waiter	—	—	—	—	—	—	—	—	✓	—	—	—	—	—	—	—
Kitchen Staff	—	—	—	—	—	—	—	—	—	✓	—	—	—	✓	—	—
Inventory Staff	—	—	—	—	—	—	—	—	—	—	—	—	—	✓	—	—
Housekeeping Supervisor	—	—	—	✓	✓	✓	—	—	—	—	—	—	✓	—	—	—
Housekeeping Staff	—	—	—	—	—	✓	—	—	—	—	—	—	—	—	—	—
Maintenance Technician	—	—	—	✓	—	—	—	—	—	—	—	—	—	—	—	—
General Staff	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Tour Operator	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—

- **Separation held:** Reception and Hotel Manager get 403 on the POS and its API (SEC-API-01/02); the Restaurant Manager gets 403 on hotel folio endpoints (SEC-API-03) and hotel reports (after fix D-02).
- **Night audit:** Hotel Manager and Administrator only; Reception gets 403 (NA-01).
- **Tour operator:** redirected to the partner portal; another operator's booking returns 404 (SEC-07).
- **Owner:** view-only permissions. Restaurant reports are available through hotel Reports, not the POS (by design: no `pos.access`).

Integration	Verified behaviour	Evidence
POS "Charge to villa" → guest folio	The order total, including 10% service and 8% tax, is posted as one folio line in the outlet's department; the order becomes "Charged to villa"; no cashier shift is needed	INT-02, example C, screenshots 08/09
Open restaurant check blocks checkout	A warning lists the open checks and "Complete checkout" is disabled; "Request restaurant settlement" notifies cashiers	PMS-12, screenshots 16–19
Checkout → housekeeping	Villa set to Vacant + Dirty, departure task created (Urgent if an arrival is due today), housekeeping notified, key cards revoked	HK-01, screenshots 20, 22
Combined invoice	A single invoice with Room, Room Service, Restaurant and Laundry sections	INT-04, screenshot 21

7 Worked examples with real amounts

Ex.	Scenario	System result (observed)	Check
A	Walk-in Nuwan Perera, G1, 29 Sep → 3 Oct 2026, 2 adults, override LKR 30,500/night, deposit 20,000 by card	VV-26-000033: $4 \times 30,500 = 122,000$ + service 12,200 + tax 10,736 = 144,936.00 ; paid 20,000; balance vs booking 124,936.00	PASS
B	Table T6, 4 covers; menu subtotal 22,800; cash 30,000	ORD-26-000098: $22,800 + 2,280 + 2,006.40 = \mathbf{27,086.40}$; change 2,913.60 ; T6 released	PASS
C	Room service for G1: Seafood linguine 5,600 + Crab soup 2,900	ORD-26-000097: $8,500 + 850 + 748 = \mathbf{10,098.00}$ posted to FOL-26-000038	PASS
C'	Laundry pressing 5 × 400 posted at reception	$2,000 + \text{tax } 160 \text{ (no service)} = \mathbf{2,160.00}$	PASS
D	Checkout of Oliver Jensen (G1, 2 nights) with an open room-service check of 3,207.60	INV-26-000019: net 71,020 + service 7,102 + tax 6,249.76 = 84,371.76 ; paid in full	PASS
D'	Training example: room 60,000 + restaurant 8,500 + laundry 2,000 (net)	$71,280 + 10,098 + 2,160 = \mathbf{83,538.00}$; less deposit 20,000 = 63,538.00 (calculated by hand with the system's rules)	Calculation
E	Departure clean of G1: accept, start, 11-item checklist, submit, inspect, approve	Dirty → Cleaning → Inspection → Ready; "Villa G1 is ready" notification	PASS
NA	Night audit, business date 29 Sep, run at 23:49	5 room nights, 3 no-shows, 1 card expired, 2 stay-over tasks; Nuwan's night $30,500 + 3,050 + 2,684 = \mathbf{36,234.00}$; a second run posts 0 (idempotent)	PASS
INT-04	Harness: room 20,000 + restaurant 4,500 (0% outlet) + laundry 1,000	$23,760 + 4,500 + 1,080 = \mathbf{29,340.00}$	PASS
POS-15	Harness: bill 22,096.80, cash 30,000	Change 7,903.20	PASS

Tax rules confirmed from settings and observed postings: service charge 10% of net; tax 8% of (net + service); laundry and extras are taxable, with service charge only when ticked.

Defects found and fixed during the audit

ID	Sev.	Symptom	Root cause	Fix (files)	Verified
D-01	High	The app ran in UTC even though <code>.env</code> said Asia/Colombo. PHP time was 5 h 30 behind MariaDB, and "today", the business date, arrivals/departures and log times were wrong between 00:00 and 05:30 local time.	<code>config/app.php</code> hard-coded <code>'timezone' => 'UTC'</code> and ignored <code>APP_TIMEZONE</code>	<code>'timezone' => env('APP_TIMEZONE', 'Asia/Colombo')</code> — <code>config/app.php</code>	PHP = DB clock; 51/51 + harness
D-02	High	Restaurant staff could open the hotel Reports page (separation leak)	The reports routes also accepted a POS permission	Routes require <code>reports.operational reports.financial</code> — <code>routes/admin.php</code>	Role matrix
D-03	High	The POS showed a bare "Unauthenticated" message and kept failing	The session ended (30-min idle, sign-out in another tab, or another account signed in); the JSON API correctly returned 401, but the client only displayed the raw message	<code>W.api</code> handles 401 → clear message, then redirect to sign-in with a <code>?return=</code> path; the login stores a safe same-app intended URL — <code>appjs</code> , <code>head.blade.php</code> , <code>LoginController.php</code>	SES-03, screenshots 75/76
D-04	Medium	A payment could be taken on an empty check (total 0), closing it with a zero invoice	No guard in <code>PosBillingService::pay</code>	Rejects with "This check is empty..." — <code>PosBillingService.php</code>	POS-17
D-05	Low	Restaurant sales page returned 403 to roles that may only see stock reports	The default report type ignored permissions	Opens the first permitted POS report — <code>SalesReportController.php</code>	Role matrix
D-06	Low	The night-audit stay-over count included tasks that already existed	<code>createTask()</code> returns the existing open task, and it was counted	Counts only <code>wasRecentlyCreated</code> — <code>HousekeepingService.php</code>	NA-03
D-07	Low	The website weather showed emoji instead of SVG icons (brief requirement)	The service returned emoji	Icon keys + inline SVG renderer — <code>WeatherService.php</code> , <code>site.js</code> , <code>site.css</code>	/weather returns icon keys; screenshot 78
D-08	High env	Intermittent HTTP 500 errors ("No application encryption key", SQLite fallback, demo login disappearing) during concurrent requests	Thread-safe Apache on Windows: <code>.env</code> variables loaded via <code>getenv</code> / <code>putenv</code> are shared across threads, so a parallel request can see a partially loaded environment	Mitigation, no code change: <code>php artisan config:cache</code> on the server (used for the walkthrough, then cleared). See O-02.	No 500s with cached config

9 Open issues and recommendations

ID	Sev.	Issue	Recommendation
O-01	High	No Windows scheduled task runs <code>artisan schedule:run</code> on this machine, so the 02:00 night audit, website-hold expiry (every minute), key-card expiry (15 min) and channel retries never run automatically. docs/SETUP.md marks the scheduler as required.	Create the Task Scheduler job from docs/SETUP.md §5 (every minute). Until then, run the night audit by hand.
O-02	High	XAMPP/Windows <code>.env</code> thread race (D-08)	Run <code>php artisan config:cache</code> after each deployment or change to <code>.env</code> . Always run <code>php artisan config:clear</code> before <code>php artisan test</code> , because cached config would point the tests at the live database.
O-03	Medium	The scheduled night audit at 02:00 uses the run's calendar date as the business date, so it posts the coming night about 22 hours early and flags no-shows only then	When run after midnight, use <code>now()->subDay()</code> as the business date, or schedule the audit at 23:55
O-04	Medium	The night audit keeps only the last summary (setting <code>night_audit_last</code>): no audit-log entry per run, no business-date lock, and the steps do not run in a single transaction	Write an <code>audit_logs</code> row per run; wrap the posting in a transaction; keep a history table of runs
O-05	Medium	The booking-form Summary ignores a nightly rate override: it showed LKR 162,756.00 while the saved booking was 144,936.00	Recalculate the summary from the override (or call the quote endpoint) whenever the override changes
O-06	Medium	"Open a shift" is hidden while the user has any open shift, although the service allows one shift per outlet, so a cashier cannot start a second outlet from the UI	Show the open-shift form for outlets without an open shift
O-07	Low	A weather failure is cached for 20 minutes; Open-Meteo took 4.4 s against a 6 s timeout, and the widget disappeared	Do not cache <code>ok:false</code> , or cache it for 1–2 minutes; raise the timeout slightly
O-08	Low	A stay-over task stays "Cleaning" after checkout; the dashboard still shows G1 "Aisha · Cleaning"	Close or cancel open stay-over tasks at checkout
O-09	Low	The folio footer "Balance LKR ..." is clipped at the card's right edge (1440 px)	Allow wrapping or reserve width for the total
O-10	Low	KPI values wrap "LKR" and the amount onto two lines on the dashboard	Use a smaller font or nowrap in <code>.stat</code>
O-11	Low	Expected business-rule errors (<code>BusinessRuleException</code>) are logged at ERROR level, filling the log	Add the exception to <code>dontReport</code> , or log at INFO
O-12	Low	Print layouts (invoice, bill) have no favicon, so the browser requests <code>/favicon.ico</code> at the server root and gets a 404 console error	Add the favicon link to the print layouts
O-13	Low	KDS tickets stay on screen until served (demo tickets over 2,000 minutes old)	Add an age filter or manager "clear stale tickets"
O-14	Low	Settings → Integrations shows an empty value for Channel manager	Show "Not configured"
O-15	Info	<code>APP_DEBUG=true</code> in <code>.env</code>	Set <code>APP_DEBUG=false</code> (and <code>APP_ENV=production</code>) before going live; this also hides the demo role cards
O-16	Info	Records written before fix D-01 store UTC wall-clock times (5 h 30 behind)	Dev data: ignore. Production data, if any: convert once (+330 minutes) on timestamp columns
O-17	Info	The hero video is not configured (ENV-08)	Upload a video in Website settings if wanted

10 Blocked and not testable

Item	Reason	What was tested instead
Physical RFID readers, encoders, door locks (KEY-08)	LOCK_DRIVER=simulator; the vendor adapter in <code>lock-bridge/</code> is a stub	All access rules through the simulator and device API with a bearer token (SIMULATED)
Live OTA — Booking.com, Agoda, Airbnb, Expedia (SRC-10)	CHANNEL_DRIVER=null; no Channex credentials	Signed webhook ingest, duplicate, cancellation and overbooking-to-conflict-queue (simulated payloads)
Real payment gateway (Stripe)	PAYMENT_DRIVER=sandbox; no keys	Sandbox approve/decline/duplicate (SRC-06..08)
WhatsApp Cloud API	No credentials	Click-to-chat links
SMS gateway	Not implemented in the code (Missing)	—
E-mail delivery	MAIL=log	Messages written to the log
Live exchange rates, Unsplash, Pexels	No API keys	Static fallback rates; own media gallery
Hero background video (ENV-08)	None configured	—
Training video MP4	No ffmpeg or screen recorder in this environment	Storyboard, narration, SRT and FFmpeg recipe provided; no video file was produced

Check	Result	Case
Unauthenticated access to /admin and /pos	302 → /login; the POS API returns 401 JSON	SEC-GUEST-01/02
CSRF on forms and the JSON API	419 without a token	SEC-CSRF-01, SES-02
Server-side role checks	403 on direct URLs and APIs across 15 roles	ROLE-*, SEC-API-01..03
Device APIs (RFID, attendance, lock bridge)	401 with a wrong bearer token	SEC-API-04
Stored XSS in guest name	Escaped	SEC-01
SQL injection in search	Parameterised queries	SEC-02
Malicious upload (PHP renamed to .jpg)	Rejected ("image could not be read")	SEC-03
Password storage	All 17 users bcrypt; minimum length 10	SEC-04
Headers on authenticated pages	X-Frame-Options SAMEORIGIN, nosniff, Cache-Control no-store, private	SEC-05
Demo sign-in panel	Rendered only when APP_ENV=local; the password is not shown on screen	SEC-06
Tour-operator data scoping	Another operator's booking → 404	SEC-07
Brute force	Account lock after 5 failures (15 min) plus a per-IP limit of 20; same message for unknown user and wrong password	ERR-01..03
Open redirect through the new ?return=	Accepted only for paths inside the app base path, never // or backslashes	Code review (D-03)
Secrets on screen	Settings shows no keys; secrets only in .env; screenshots checked	Screenshot 64 review
Debug mode	APP_DEBUG=true (local) — must be false in production	O-15

12 UI, responsive and browser console

- Every walkthrough page rendered at 1440 px; the housekeeping tasks and POS dashboard at 390 px (phone); the front desk at 768 px (tablet). No horizontal scrolling was observed in the captured pages.
- Browser console errors in the final walkthrough: `/favicon.ico` 404 on print pages (O-12); intentional 403, 404 and 401 responses from the error and session tests; and first-pass errors caused by the test script itself (a root-relative URL and an empty order id). No JavaScript exceptions came from the application.
- Visual issues: O-05, O-09, O-10, O-14. With full-page captures, the sidebar stretches to the page height; this comes from the capture method (the viewport grows to the page height), not from the app.
- Theme: users can choose light or dark; both are used in the screenshots.

13 Night audit — code review

`NightAuditService::run($date)`, called from Front desk → Run night audit (`frontdesk.night_audit`) or `hms:night-audit`, which is scheduled daily at 02:00:

- 1 For every checked-in booking: `RoomChargeService::postNights($b, $date + 1 day)` posts every unposted night before the day after the business date, with 10% service and 8% tax and a rate factor for discounts. It is idempotent per booking-villa night (NA-03).
- 2 Confirmed bookings with arrival < business date → `markNoShow`.
- 3 Expire website holds; expire key cards past validity.
- 4 `generateStayovers($date + 1)` for occupied villas not departing that day (count fixed in D-06).
- 5 `markAbsences($date - 1)` for staff attendance.
- 6 Saves the summary to setting `night_audit_last` only (O-04).

Timing (O-03): with the 02:00 schedule, the business date is the new calendar day. Running the audit before midnight — as in this test at 23:49 — gives the expected hotel-industry result.

14 Test data and reproducibility

- A dump of the dev database was taken before QA (`vaasal_villa_hms28_before_qa.sql`) and restored before the final walkthrough; a second dump holds the state after the first partial run. Both are in the QA scratch folder, not in the project.
- Actions performed on the dev database during the walkthrough (so the data now reflects them): Oliver Jensen checked out of G1; G1 cleaned and approved; walk-in VV-26-000033 (Nuwan Perera, G1) created and checked in; room-service ORD-26-000097 charged to villa; laundry posted; night audit run for 29 Sep (3 bookings became no-shows); the cashier's In-villa dining shift of 28 Sep closed through day-end; a new Vaasal Kitchen shift opened with a 10,000 float; two leftover demo checks on T6 (ORD-26-000085, ORD-26-000095) settled by card; T6 order ORD-26-000098 paid in cash.
- The configuration was cached only for the walkthrough and cleared afterwards, so `php artisan test` keeps using the test database.
- Scripts used: the QA harness in the repository (`tests/QA/QaAuditTest.php`); the browser-automation and document-build scripts are listed in FINAL_SUMMARY.md.

docs/qa-training/* (new)	This report, the Tamil manual, the video script, SRT, test cases, screenshots, data

16 Key evidence

A few screenshots that back the main conclusions. All 82 are in [screenshots/](#) and in the Tamil manual.

The screenshot displays the 'Check out' interface for Oliver Jensen at Villa G1, spanning from 27 Sep to 29 Sep 2026. A prominent red alert box states: '1 restaurant check(s) still open for this stay.' It lists an 'In-villa dining' check (ORD-26-000096) for LKR 3,207.60, which is currently 'Open'. A button labeled 'Request restaurant settlement' is provided. Below this, a blue box notes that '1 outstanding room night(s) were just posted to the folio so the balance below is final.'

The main section shows the 'Folio FOL-26-000025' for the guest account. It contains a table of transactions:

DATE	DEPARTMENT	DESCRIPTION	QTY	NET	SVC	TAX	TOTAL
27 Sep	Room	Villa G1 — Frangipani Garden Villa · night of 27 Sep 2026 by Kavin Raj	1	34,160.00	3,416.00	3,006.08	40,582.08
28 Sep	Room	Villa G1 — Frangipani Garden Villa · night of 28 Sep 2026 by Kavin Raj	1	34,160.00	3,416.00	3,006.08	40,582.08

Below the table, a 'PAYMENTS & DEPOSITS' section shows a 'Bank transfer' deposit of -24,300.00 on 27 Sep. The summary at the bottom indicates 'Charges LKR 81,164.16 · Paid LKR 24,300.00' and a 'Balance LKR 56,864.16'. Buttons for 'Print folio', 'Post charge', and 'Take payment' are visible.

On the right, the 'Settle & check out' panel shows the total balance of LKR 56,864.16. It allows settling with a card (amount 56864.16) and lists actions to be performed on checkout: issue the final combined invoice, revoke active key cards, and set G1 to Vacant + Dirty. A 'Complete checkout' button is at the bottom.

Figure 1 — Integration: an open restaurant check (ORD-26-000096, LKR 3,207.60) blocks checkout; Complete checkout is disabled.
screenshots/16_checkout_blocked.png · 1440x1058 px

Figure 3 — Example B: balance 27,086.40, tendered 30,000, change 2,913.60. (The second empty Cash line was added by the test script's extra click; its amount is 0.)
 screenshots/06_pos_payment.png · 1440x900 px

Figure 4 — Fix D-03: after the session ends, the POS shows a clear message and returns to sign-in.
 screenshots/75_session_ended.png · 1440x900 px

Figure 5 — Night audit for business date 29 Sep 2026: 5 room nights, 3 no-shows, 1 card expired, 2 stay-over tasks.

Figure 6 — Open issue O-05: the Summary still shows LKR 162,756.00 after a LKR 30,500/night override; the saved booking is LKR 144,936.00.
